

Study Synopsis

Protocol: IMMUNO-MEL-201

Study Title: A Phase II Randomized, Multicenter, Open-Label Study Evaluating ImmunoX Plus Standard Therapy Versus Standard Therapy Alone in Patients with Unresectable or Metastatic Melanoma.

Section	Summary
Sponsor	OncoNova Biotherapeutics (Fictional Portfolio Sponsor)
Phase	II
Therapeutic Area	Advanced Melanoma
Design	Randomized (1:1), multicenter, parallel-group
Sites	5 sites (Canada, USA, Germany, India)
Enrollment	120 participants
Arms	Arm A: ImmunoX + Standard Therapy; Arm B: Standard Therapy
Primary Objective	Evaluate progression-free survival (PFS).
Secondary Objectives	Overall response rate, overall survival, safety, quality of life.
Primary Endpoint	PFS (RECIST v1.1).
Eligibility	Adults >=18 years, ECOG 0-1, measurable metastatic melanoma.
Exclusions	Active autoimmune disease, uncontrolled infection, prior ImmunoX.
Visits	Screening, Baseline, W4, W8, W12, W18, W24, End of Treatment, Safety Follow-up.
EDC	REDCap longitudinal database with 21 eCRFs.
Safety	AE/SAE collection using CTCAE v5.0.
Statistics	Intent-to-treat efficacy analysis; safety on treated population.

Clinical Data Management Scope

Educational portfolio demonstrating REDCap database design, edit checks, branching logic, UAT, query management, and simulated database lock. This is a fictional study created for interview and training purposes.
